Subject: Application for Software Engineer (Java), CX Role – NiCE

Dear Hiring Manager,

I am excited to apply for the Cloud Cost Optimization role at NiCE. With nearly four years of experience building and operating cloud-native microservices on AWS and Azure, I bring a strong combination of backend engineering, automation, and cloud infrastructure expertise that aligns closely with the needs of this position.

In my current role as a Software Engineer at In-Solution Global, I design and deploy distributed Spring Boot microservices on Kubernetes while building CI/CD automation pipelines using Jenkins, Docker, and Helm. I regularly work with observability platforms such as Prometheus, Grafana, and ELK to analyze system utilization trends, improve operational efficiency, and support data-driven infrastructure decisions. Through these initiatives, I have gained hands-on experience evaluating resource utilization, optimizing deployments, and automating engineering workflows—capabilities that directly support cloud cost-optimization initiatives.

I am particularly interested in contributing to NiCE's FinOps and cloud cost-efficiency initiatives by developing automation tools that analyze usage patterns, identify optimization opportunities, and drive measurable savings across cloud environments. My background in Java-based backend development, cloud platforms (AWS and Azure), SQL-driven analytics, and DevOps automation enables me to quickly build practical solutions that bridge engineering and cost-management objectives.

NiCE's focus on innovation, operational excellence, and continuous improvement strongly resonates with my professional interests, and I am enthusiastic about the opportunity to contribute to building scalable, cost-efficient cloud systems while expanding my expertise in FinOps practices.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my experience can contribute to your team.

Sincerely,

Pratik Chandlekar
