Subject: Application for Senior Software Engineer – Altisource

I am excited to apply for the Senior Software Engineer position at Altisource. With over four years of experience building scalable, cloud-native backend platforms using Java, Spring Boot, and distributed microservices architectures, I am enthusiastic about the opportunity to contribute to Altisource's mission of transforming real estate transaction services through technology innovation.

In my current role at In-Solution Global, I design and develop production-grade Spring Boot microservices, secure API gateway architectures, and real-time transaction processing systems leveraging Kafka, PostgreSQL, Redis, and Kubernetes. I have hands-on experience deploying cloud-native applications across AWS and Azure environments, implementing CI/CD pipelines, and building highly observable, reliable production systems. Additionally, I continuously explore emerging technologies, including Generative AI API integrations, to enhance application capabilities and deliver smarter developer and customer experiences.

Altisource's focus on innovation, scalable technology platforms, and industry-wide impact strongly aligns with my professional interests. I am particularly excited about contributing to backend platform design, cloud-native engineering, and next-generation intelligent features that support large-scale mortgage and real estate ecosystems.

I would welcome the opportunity to discuss how my backend engineering experience, cloud expertise, and passion for building scalable systems can contribute to the continued success of Altisource. Thank you for your time and consideration.

Sincerely,

Pratik Chandekar
