Subject: Application for Java Full-Stack Engineer Role

Dear Hiring Manager,

I am excited to apply for the Java Full-Stack Engineer position at your organization. With 3.9+ years of experience building end-to-end enterprise applications using Java (8/11/17), Spring Boot microservices, and modern front-end frameworks such as React and Angular, I bring strong hands-on expertise across both backend services and front-end integrations.

In my current role, I develop Spring Boot microservices, REST APIs, and responsive UI modules that power real-time transaction monitoring platforms. My experience includes designing scalable microservices architectures, implementing secure API gateways, integrating frontend dashboards with backend services, and building containerized deployments using Docker, Kubernetes, Jenkins, and CI/CD pipelines. I also work extensively with PostgreSQL, Redis, Kafka-based event streaming, and performance optimization for high-traffic applications.

I enjoy collaborating across product, QA, and DevOps teams throughout the full software development life cycle, contributing to architecture discussions, mentoring engineers, and ensuring the delivery of secure, scalable, and maintainable applications.

I would welcome the opportunity to bring my full-stack engineering expertise and problem-solving skills to your team. Thank you for your time and consideration.

Sincerely,

Pratik Chandlekar
