Subject: Application for Backend Engineer – AbhiBus

Dear Hiring Manager,

I am excited to apply for the Backend Engineer position at AbhiBus (ixigo). With nearly 4 years of experience building high-availability, scalable backend systems using Java, Spring Boot, and distributed microservices architectures, I am eager to contribute to AbhiBus's large-scale bus ticketing and travel booking platform serving millions of users across India.

In my current role at In-Solution Global, I design and develop production-grade Spring Boot microservices and REST APIs supporting real-time transactional workloads. My experience includes building event-driven systems using Kafka, designing schema-based multitenancy solutions, implementing secure API gateway architectures, and optimizing database-driven platforms using PostgreSQL and Redis caching for performance and reliability. I have also contributed to cloud-native deployments and CI/CD automation using Docker, Kubernetes, Jenkins, and Azure/AWS environments, ensuring scalable and resilient production systems.

Beyond development, I actively participate in system design discussions, performance optimization initiatives, production troubleshooting, and mentoring engineers, while collaborating closely with product, QA, and DevOps teams to deliver high-quality features end-to-end. I am particularly excited about this opportunity because AbhiBus operates at consumer-internet scale, and I am enthusiastic about building backend platforms that power high-traffic booking experiences and real-time services.

I would welcome the opportunity to discuss how my backend engineering experience and distributed systems expertise can contribute to the continued growth and performance of AbhiBus's platform.

Thank you for your time and consideration.

Sincerely,
Pratik Chandlekar
